Star Schema Tables

Fact_Accuracy	Faits : issues de qualite (17 colonnes)
Dim_Date	Date (Date_ID, Full_Date, Month, Year...)
Dim_Client	Client (Client_Key, CIN, Nom, Ville, Type...)
Dim_Compte	Compte (Compte_Key, Solde, Statut, Date_Ouv...)
Dim_Transaction	Transaction (Transaction_Key, Montant, Canal...)
Dim_Credit	Credit (Credit_Key, Montant, Taux, Duree...)
Dim_Agence	Agence (Agence_Key, Code, Nom, Ville...)

Relationships:

Fact_Accuracy[Date_Key] -> Dim_Date[Date_ID]
Fact_Accuracy[Client_Key] -> Dim_Client[Client_Key]
Fact_Accuracy[Compte_Key] -> Dim_Compte[Compte_Key]
Fact_Accuracy[Transaction_Key] -> Dim_Transaction[Transaction_Key]
Fact_Accuracy[Credit_Key] -> Dim_Credit[Credit_Key]
Fact_Accuracy[Agence_Key] -> Dim_Agence[Agence_Key]

Overview

Vision globale de la qualite des donnees sur tous les domaines

KPIs

Total Issues	Total Issues	Viz: Carte
Active Issues	Active Issues	Viz: Carte
Resolution Rate	Resolution Rate %	Viz: Jauge / %
Overall Score	Score %	Viz: Carte avec etat

Visualizations

Chart	Type	Description
Issues by Domain	Barres groupees	Score % + Active Issues par domaine
Active Issues by Severity	Donut	Repartition High / Medium / Low
Issues Trend	Line chart	Evolution des issues dans le temps
Domain Score Gauge	4 jauges	Score % pour Client/Compte/Transaction/Credit

Filters

- Date range
- Domain (slicer)

Client

Qualite des donnees Clients : CIN, Telephone, Email, Date_Naissance

KPIs

Client Score	Client Score %	Viz: Carte avec couleur
Client Issues	Client Active Issues	Viz: Carte
High Severity	Active High Issues (Client)	Viz: Carte rouge

Visualizations

Chart	Type	Description
Issues by Column	Barres horizontales	CIN, Telephone, Email, Date_Naissance
Severity Breakdown	Donut	High vs Medium par colonne
Issue Details	Table	Ligne_Id, Valeur_Erreur, Valeur_Attendue, Date_Detection

Filters

- Table_Name = Client
- Date range
- Severity

Compte

Qualite des donnees Comptes : Solde, Date_Ouverture, Statut

KPIs

Compte Score	Compte Score %	Viz: Carte avec couleur
Compte Issues	Compte Active Issues	Viz: Carte
Statut Anomalies	Statut Anomalies	Viz: Carte orange

Visualizations

Chart	Type	Description
Issues by Column	Barres verticales	Solde, Date_Ouverture, Statut
Solde Distribution	Scatter	Compte_ID vs Solde (anomalies)
Issue Details	Table	Ligne_Id, Valeur_Erreur, Date_Detection

Filters

- Table_Name = Compte
- Column_Name
- Date range

Transaction

Qualite des donnees Transactions : Montant, Date_Transaction

KPIs

Transaction Score	Transaction Score %	Viz: Carte avec couleur
Transaction Issues	Transaction Active Issues	Viz: Carte
Montant Anomalies	Montant Anomalies	Viz: Carte

Visualizations

Chart	Type	Description
Issues by Column	Barres	Montant, Date_Transaction
Montant Outliers	Scatter	Transaction_ID vs Montant absurde
Date Trend	Line	Issues par date de detection
Issue Details	Table	Reference, Montant, Date_Transaction

Filters

- Table_Name = Transaction_Bancaire
- Date range

Credit

Qualite des donnees Credits : Montant, Taux_Interet, Date_Debut

KPIs

Credit Score	Credit Score %	Viz: Carte avec couleur
Credit Issues	Credit Active Issues	Viz: Carte
Taux Anomalies	Taux Anomalies	Viz: Carte

Visualizations

Chart	Type	Description
Issues by Column	Barres	Montant, Taux_Interet, Date_Debut
Taux Distribution	Histogram	Taux_Interet anomalies
Issue Details	Table	Credit_ID, Valeur_Erreur, Date_Debut

Filters

- Table_Name = Credit
- Column_Name
- Date range

DAX Measures Reference

All DAX measures are documented in the DAX_New.txt file.

Open PowerBI > Modeling > New Measure and paste each measure.

Key conventions:

- Score % uses SWITCH on Table_Name to get total records
- Severity filters use CALCULATE with filter arguments
- Domain pages use CALCULATE(..., Table_Name = 'Domain')
- Time intelligence uses Dim_Date relationships
